FOR PERFECT RESULTS

Thank you for choosing this AEG product. We have created it to give you impeccable performance for many years, with innovative technologies that help make life simpler features you might not find on ordinary appliances. Please spend a few minutes reading to get the very best from it.

CUSTOMER CARE AND SERVICE

Always use original spare parts.

When contacting our Authorised Service Centre, ensure that you have the following data available: Model, PNC, Serial Number.

The information can be found on the rating plate.

Warning / Caution-Safety information

General information and tips

Environmental information

Subject to change without notice.

1. SAFETY INFORMATION

Before the installation and use of the appliance, carefully read the supplied instructions. The manufacturer is not responsible if an incorrect installation and use causes injuries and damages. Always keep the instructions with the appliance for future reference.

1.1 Children and vulnerable people safety

- This appliance can be used by children aged from 8 years and above and persons with reduced physical, sensory or mental capabilities or lack of experience and knowledge if they have been given supervision or instruction concerning use of the appliance in a safe way and understand the hazards involved.
- Do not let children play with the appliance.
- Keep all packaging away from children.
- Keep children and pets away from the appliance when it operates or when it cools down. Accessible parts are hot.
- If the appliance has a child safety device, we recommend you activate it.
- Cleaning and user maintenance shall not be made by children without supervision.
- Children of less than 3 years should be kept away unless continuously supervised.

1.2 General Safety

- The appliance and its accessible parts become hot during use. Do not touch the heating elements.
- Do not operate the appliance by means of an external timer or separate remote-control system.
- Unattended cooking on a hob with fat or oil can be dangerous and may result in fire.
- Never try to extinguish a fire with water, but switch off the appliance and then cover flame e.g. with a lid or a fire blanket.

- Do not store items on the cooking surfaces.
- Metallic objects such as knives, forks, spoons and lids should not be placed on the hob surface since they can get hot.
- Do not use a steam cleaner to clean the appliance.
- After use, switch off the hob element by its control and do not rely on the pan detector.
- If the glass ceramic surface/ glass surface is cracked, switch off the appliance to avoid the possibility of electric shock
- In case of hotplate glass breakage:
 - shut immediately off all burners and any electrical heating element and isolate the appliance from the power supply,
 - do not touch the appliance surface,
 - do not use the appliance.
- If the supply cord is damaged, it must be replaced by the manufacturer, an authorized Service or similarly qualified persons in order to avoid a hazard.
- Where the appliance is directly connected to the power supply, an all-pole isolating switch with a contact gap is required. Complete disconnection in compliance with the conditions specified in overvoltage category III must be guaranteed. The earth cable is excluded from this.
- When you route the mains cable, make sure that the cable doesn't come into direct contact (for example using insulating sleeving) with parts that can reach temperatures of more than 50°C above room temperature.

2. SAFETY INSTRUCTIONS

This appliance is suitable for the following markets: GB

2.1 Installation

WARNING!

Only a qualified person must install this appliance.

- Remove all the packaging.
- Do not install or use a damaged appliance.

- Obey the installation instruction supplied with the appliance.
- Keep the minimum distance from the other appliances and units.
- Always be careful when you move the appliance because it is heavy. Always wear safety gloves.
- Seal the cut surfaces with a sealant to prevent moisture to cause swelling.
- Protect the bottom of the appliance from steam and moisture.
- Do not install the appliance adjacent to a door or under a window. This prevents hot cookware to fall from the appliance when the door or the window is opened.
- If the appliance is installed above drawers make sure that the space, between the bottom of the appliance and the upper drawer, is sufficient for air circulation.
- The bottom of the appliance can get hot. Make sure to install a non-combustible separation panel under the appliance to prevent access to the bottom.
- Make sure that the ventilation space of 2 mm, between the worktop and the front of the below unit, is free. The warranty does not cover damages caused by the lack of an adequate ventilation space.
- Do not let the electricity mains cable tangle.
- Make sure that a shock protection is installed.
- Use the strain relief clamp on the cable.
- Make sure the mains cable or plug (if applicable) does not touch the hot appliance or hot cookware, when you connect the appliance to the near sockets
- Do not use multi-plug adapters and extension cables.
- Make sure not to cause damage to the mains plug (if applicable) or to the mains cable. Contact an Authorised Service Centre or an electrician to change a damaged mains cable.
- The shock protection of live and insulated parts must be fastened in such a way that it cannot be removed without tools.
- Connect the mains plug to the mains socket only at the end of the installation. Make sure that there is access to the mains plug after the installation.
- If the mains socket is loose, do not connect the mains plug.
- Do not pull the mains cable to disconnect the appliance. Always pull the mains plug.
- Use only correct isolation devices: line protecting cut-outs, fuses (screw type fuses removed from the holder), earth leakage trips and contactors.
- The electrical installation must have an isolation device which lets you disconnect the appliance from the mains at all poles. The isolation device must have a contact opening width of minimum 3 mm.

2.2 Electrical Connection

WARNING!

Risk of fire and electrical shock.

- All electrical connections should be made by a qualified electrician.
- The appliance must be earthed.
- Before carrying out any operation make sure that the appliance is disconnected from the power supply.
- Make sure that the electrical information on the rating plate agrees with the power supply. If not contact an electrician.
- Make sure the appliance is installed correctly. Loose and incorrect electricity mains cable or plug (if applicable) can make the terminal become too hot.
- Use the correct electricity mains cable.

2.3 Gas connection

- All gas connections should be made by a qualified person.
- Before installation, make sure that the local distribution conditions (nature of the gas and gas pressure) and the adjustment of the appliance are compatible.
- Make sure that there is air circulation around the appliance.
- The information about the gas supply is on the rating plate.

- This appliance is not connected to a device, which evacuates the products of combustion. Make sure to connect the appliance according to current installation regulations. Pay attention to requirements regarding adequate ventilation.

2.4 Use

WARNING!

Risk of injury, burns and electrical shock.

- Remove all the packaging, labelling and protective film (if applicable) before first use.
- Use this appliance in a household environment.
- Do not change the specification of this appliance.
- Make sure that the ventilation openings are not blocked.
- Do not let the appliance stay unattended during operation.
- Set the cooking zone to "off" after each use.
- Do not rely on the pan detector.
- Do not put cutlery or saucepan lids on the cooking zones. They can become hot.
- Do not operate the appliance with wet hands or when it has contact with water.
- Do not use the appliance as a work surface or as a storage surface.
- If the surface of the appliance is cracked, disconnect immediately the appliance from the power supply. This to prevent an electrical shock.
- Users with a pacemaker must keep a distance of minimum 30 cm from the induction cooking zones when the appliance is in operation.
- When you place food into hot oil, it may splash.

WARNING!

Risk of fire and explosion

- Fats and oil when heated can release flammable vapours. Keep flames or heated objects away from fats and oils when you cook with them.
- The vapours that very hot oil releases can cause spontaneous combustion.

- Used oil, that can contain food remnants, can cause fire at a lower temperature than oil used for the first time.
- Do not put flammable products or items that are wet with flammable products in, near or on the appliance.

WARNING!

Risk of damage to the appliance.

- Do not keep hot cookware on the control panel.
- Do not let cookware to boil dry.
- Be careful not to let objects or cookware fall on the appliance. The surface can be damaged.
- Do not activate the cooking zones with empty cookware or without cookware.
- Do not put aluminium foil on the appliance.
- Cookware made of cast iron, aluminium or with a damaged bottom can cause scratches on the glass / glass ceramic. Always lift these objects up when you have to move them on the cooking surface.
- Use only stable cookware with the correct shape and diameter larger than the dimensions of the burners.
- Make sure the flame does not go out when you quickly turn the knob from the maximum to the minimum position.
- Use only the accessories supplied with the appliance.
- Do not install a flame diffuser on the burner.
- The use of a gas cooking appliance results in the production of heat and moisture. Provide good ventilation in the room where the appliance is installed.
- Prolonged intensive use of the appliance may call for additional ventilation, for example opening of a window, or more effective ventilation, for example increasing the level of mechanical ventilation where present.
- This appliance is for cooking purposes only. It must not be used for other purposes, for example room heating.

2.5 Care and cleaning

- Clean regularly the appliance to prevent the deterioration of the surface material.
- Deactivate the appliance and let it cool down before you clean it.
- Disconnect the appliance from the electrical supply before maintenance.
- Do not use water spray and steam to clean the appliance.
- Clean the appliance with a moist soft cloth. Only use neutral detergents. Do not use abrasive products, abrasive cleaning pads, solvents or metal objects.

- Do not clean the burners in the dishwasher.

2.6 Disposal

WARNING!

Risk of injury or suffocation.

- Contact your municipal authority for information on how to discard the appliance correctly.
- Disconnect the appliance from the mains supply.
- Cut off the mains cable and discard it.
- Flat the external gas pipes.

3. PRODUCT DESCRIPTION

3.1 Cooking surface layout

- 1** Control panel
- 2** Induction cooking zones
- 3** Rapid burner
- 4** Semi-rapid burner
- 5** Control knobs

3.2 Control knob

Symbol	Description
	no gas supply / off position

Symbol	Description
	ignition position / maximum gas supply
	minimum gas supply

3.3 Control panel layout

Use the sensor fields to operate the appliance. The displays, indicators and sounds tell which functions operate.

Sensor field	Function	Comment
1	⓪	ON / OFF To activate and deactivate the hob.
2	🔒	Lock / The Child Safety Device To lock / unlock the control panel.
3	^ / v	- To set a heat setting.
4	-	Heat setting display To show the heat setting.
5	-	Timer indicators of cooking zones To show for which zone you set the time.
6	-	Timer display To show the time in minutes.
7	⓪!	- To select the cooking zone.
8	+ / -	- To increase or decrease the time.
9	⓪⓪	Power function To activate and deactivate the function.
10	STOP + GO	STOP+GO To activate and deactivate the function.

3.4 Heat setting displays

Display	Description
⓪	The cooking zone is deactivated.
1 - 9 / 2 - 6	The cooking zone operates.
u	STOP+GO function operates.
A	Automatic Heat Up function operates.

Display	Description
 P	Power function operates.
 E + digit	There is a malfunction.
 H	A cooking zone is still hot (residual heat).
 L	Lock / The Child Safety Device function operates.
 F	Not correct cookware or too small or no cookware on the cooking zone.
 -	Automatic Switch Off function operates.

3.5 Residual heat indicator

WARNING!

 There is a risk of burns from residual heat.

The induction cooking zones make the heat necessary for cooking process directly in the bottom of the cookware. The glass ceramic is heated by the heat of the cookware.

4. DAILY USE

WARNING!

Refer to Safety chapters.

4.1 Gas burners

Burner overview

- A) Burner cap and crown
- B) Thermocouple
- C) Ignition candle

Ignition of the burner

Always light the burner before you put on the cookware.

WARNING!

Be very careful when you use open fire in the kitchen environment. The manufacturer declines any responsibility in case of the flame misuse.

1. Push the control knob down and turn it counterclockwise to the maximum gas supply position ().
2. Keep the control knob pushed for equal or less than 10 seconds. This lets the thermocouple warm up. If not, the gas supply is interrupted.
3. Adjust the flame after it is regular.

If after some tries the burner does not light, check if the crown and its cap are in correct positions.

**WARNING!**

Do not keep the control knob pushed for more than 15 seconds. If the burner does not light after 15 seconds, release the control knob, turn it into off position and try to light the burner again after minimum 1 minute.

**CAUTION!**

In the absence of electricity you can ignite the burner without electrical device; in this case approach the burner with a flame, turn the control knob counter-clockwise to maximum gas supply position and push it down. Keep the control knob pushed for equal or less than 10 seconds to let the thermocouple warm up.

If the burner accidentally goes out, turn the control knob to the off position and try to light the burner again after minimum 1 minute.

The spark generator can start automatically when you switch on the mains, after installation or a power cut. It is normal.

Turning the burner off

To put the flame out, turn the knob to the off position ●.

**WARNING!**

Always turn the flame down or switch it off before you remove the pans from the burner.

4.2 Induction cooking zones

Activating and deactivating

Touch  for 1 second to activate or deactivate the hob.

Automatic Switch Off

The function deactivates the hob automatically if:

- All cooking zones are deactivated.
- You do not set the heat setting after you activate the hob.
- You spill something or put something on the control panel for more than 10 seconds (a pan, a cloth, etc.). An acoustic signal sounds and the hob deactivates. Remove the object or clean the control panel.
- The hob gets too hot (e.g. when, a saucepan boils dry). Let the cooking zone cool down before you use the hob again.
- You use incorrect cookware. The symbol  comes on and the cooking zone deactivates automatically after 2 minutes.
- You do not deactivate a cooking zone or change the heat setting. After some time  comes on and the hob deactivates. See below.

The relation between heat setting and times of the function:

-  1 - 2 — 6 hours
- 3 - 4 — 5 hours
- 5 — 4 hours
- 6 - 9 — 1.5 hours

The heat setting

Touch  to increase the heat setting.

Touch  to decrease the heat setting.

Touch  and  at the same time to deactivate the cooking zone.

Automatic Heat Up

If you activate this function you can get a necessary heat setting in a shorter time. The function sets the highest heat setting for some time and then decreases to the correct heat setting.

To activate the function the cooking zone must be cold.

To activate the function for a cooking zone: touch  (P comes on).

Immediately touch  (R comes on).

Immediately touch  until the correct heat setting comes on. After 3 seconds  comes on.

To deactivate the function: touch .

Power function

This function makes more power available to the induction cooking zones. The function can be activated for the induction cooking zone only for a limited period of time. After this time the induction cooking zone automatically sets back to the highest heat setting.

To activate the function for a cooking zone: touch   comes on.

To deactivate the function: touch  or .

Timer

Count Down Timer

You can use this function to set how long the cooking zone operates for only this one time.

First set the cooking zone then set the function. You can set the heat setting before or after you set the function.

To set the cooking zone: touch  again and again until the indicator of a necessary cooking zone comes on.

To activate the function or change the time: touch  or  of the timer to set the time (00 - 99 minutes). When the indicator of the cooking zone starts to flash slowly the time counts down.

To see the remaining time: set the cooking zone with . The indicator of the cooking zone starts to flash quickly. The display shows the remaining time.

To deactivate the function: set the cooking zone with  and touch . The remaining time counts back to 00. The indicator of the cooking zone goes out.

 When the time comes to an end, the sound operates and 00 flashes. The cooking zone deactivates.

To stop the sound: touch .

Minute Minder

You can use this function as a **Minute Minder** when the hob is activated and the cooking zones do not operate (the heat setting display shows .

To activate the function: touch .

Touch  or  of the timer to set the time. When the time comes to an end, the sound operates and 00 flashes.

To stop the sound: touch .

 The function has no effect on the operation of the cooking zones.

STOP+GO

This function sets all cooking zones that operate to the lowest heat setting.

When the function operates, you cannot change the heat setting.

The function does not stop the timer functions.

To activate the function: touch   comes on.

To deactivate the function: touch . The previous heat setting comes on.

Lock

You can lock the control panel while cooking zones operate. It prevents an accidental change of the heat setting.

Set the heat setting first.

To activate the function: touch   comes on for 4 seconds. The Timer stays on.

To deactivate the function: touch . The previous heat setting comes on.

 When you deactivate the hob, you also deactivate this function.

The Child Safety Device

This function prevents an accidental operation of the hob.

To activate the function: activate the hob with . Do not set the heat setting. Touch  for 4 seconds.  comes on. Deactivate the hob with .

To deactivate the function: activate the hob with . Do not set the heat setting. Touch  for 4 seconds.  comes on. Deactivate the hob with .

To override the function for only one cooking time: activate the hob with .  comes on. Touch  for 4 seconds. **Set the heat setting in 10 seconds.** You can operate the hob. When you deactivate the hob with  the function operates again.

Power management function

- All cooking zones are connected to one phase (see illustration).
- The phase has a maximum electricity loading of 3700 W.

- The function divides the power between cooking zones.
- The function activates when the total electricity loading of the cooking zones exceeds 3700 W.
- The function decreases the power to the other cooking zones.
- The heat setting display of the reduced zones changes between two levels.

5. HINTS AND TIPS

WARNING!
Refer to Safety chapters.

5.1 Cookware

Electric:

For induction cooking zones a strong electro-magnetic field creates the heat in the cookware very quickly.

Use the induction cooking zones with correct cookware.

Cookware material

- **correct:** cast iron, steel, enamelled steel, stainless steel, the bottom made of multi-layer (with correct mark from a manufacturer).
- **not correct:** aluminium, copper, brass, glass, ceramic, porcelain.

Cookware is correct for an induction hob if:

- some water boils very quickly on a zone set to the highest heat setting.

- a magnet pulls on to the bottom of the cookware.

The bottom of the cookware must be as thick and flat as possible.

Cookware dimensions

Induction cooking zones adapt to the dimension of the bottom of the cookware automatically to some limit.

The cooking zone efficiency is related to the diameter of the cookware. The cookware with a smaller diameter than the minimum receives only a part of the power generated by the cooking zone.

Refer to "Technical information" chapter.

CAUTION!

Do not use cast iron pans, potstones, earthenware, grill or toaster plates.

Gas:

**WARNING!**

Do not put the same pan on two burners.

**WARNING!**

Do not put unstable or damaged pots on the burners to prevent from spill and injury.

**CAUTION!**

Make sure that the bottoms of pots do not stand above the control knobs, otherwise the flame heats the control knobs up.

**CAUTION!**

Make sure that pot handles are not above the front edge of the cooktop.

**CAUTION!**

Make sure that the pots are placed centrally on the burners in order to get maximum stability and to get lower gas consumption.

**CAUTION!**

Liquids spilt during cooking can cause the glass to break.

5.2 Diameters of cookware

Use cookware with diameters applicable to the size of burners.

Burner	Diameter of cookware (mm)
Rapid	180 - 220
Semi-rapid	120 - 220

5.3 Energy saving

- If it is possible, always put the lids on the cookware.
- Put cookware on a cooking zone before you start it.
- Use the residual heat to keep the food warm or to melt it.
- When the liquid starts to boil, turn down the flame to barely simmer the liquid.

5.4 The noises during operation (for induction cooking zones)

If you can hear:

- crack noise: cookware is made of different materials (sandwich construction).
- whistle sound: you the cooking zone with high power level and the cookware is made of different materials (sandwich construction).
- humming: you use high power level.
- clicking: electric switching occurs.
- hissing, buzzing: the fan operates.

The noises are normal and do not refer to hob malfunction.

5.5 Examples of cooking applications (for induction cooking zones)

The relation between the heat setting and the cooking zone consumption of power is not linear. When you increase the heat setting, it is not proportional to the increase of the cooking zone consumption of power. It means that the cooking zone with the medium heat setting uses less than a half of its power.

The data in the table is for guidance only.

Heat setting	Use to:	Time (min)	Hints
 - 1	Keep cooked food warm.	as necessary	Put a lid on the cookware.

Heat setting	Use to:	Time (min)	Hints
1 - 2.	Hollandaise sauce, melt: butter, chocolate, gelatine.	5 - 25	Mix from time to time.
1 - 2.	Solidify: fluffy omelettes, baked eggs.	10 - 40	Cook with a lid on.
2. - 3.	Simmer rice and milkbased dishes, heating up ready-cooked meals.	25 - 50	Add the minimum twice as much liquid as rice, mix milk dishes part procedure through.
3. - 4.	Steam vegetables, fish, meat.	20 - 45	Add some tablespoons of liquid.
4. - 5.	Steam potatoes.	20 - 60	Use max. ¼ l water for 750 g of potatoes.
4. - 5.	Cook larger quantities of food, stews and soups.	60 - 150	Up to 3 l liquid plus ingredients.
5. - 7	Gentle fry: escalope, veal cordon bleu, cutlets, rissoles, sausages, liver, roux, eggs, pancakes, doughnuts.	as necessary	Turn halfway through.
7 - 8	Heavy fry, hash browns, loin steaks, steaks.	5 - 15	Turn halfway through.
9	Boil water, cook pasta, sear meat (goulash, pot roast), deep-fry chips.		
	Boil large quantities of water. Power function is activated.		

6. CARE AND CLEANING

WARNING!

Refer to Safety chapters.

6.1 General information

- Clean the hob after each use.
- Always use cookware with clean bottom.
- Scratches or dark stains on the surface have no effect on how the hob operates.
- Use a special cleaner applicable for the surface of the hob.
- Use a special scraper for the glass.
- Wash stainless steel parts with water, and then dry them with a soft cloth.

6.2 Pan supports

The pan supports are not resistant to washing in a dishwasher. They must be washed by hand.

1. Remove the pan supports to easily clean the hob.

Be very careful when you replace the pan supports to prevent the hob top from damage.

2. After you clean the pan supports, make sure that they are in correct positions.
3. Make sure that the arms of the pan supports are in the centre of the

burner for the burner to operate correctly.

6.3 Cleaning the hob

- **Remove immediately:** melted plastic, plastic foil, and food with sugar. If not, the dirt can cause damage to the hob. Put the special scraper on the glass surface at an acute angle and move the blade on the surface.
- **Remove when the hob is sufficiently cool:** limescale rings, water rings, fat stains, shiny metallic discoloration. Clean the hob with a moist cloth and some detergent. After cleaning, rub the hob dry with a soft cloth.
- To clean the enamelled parts, cap and crown, wash them with warm

soapy water and dry them carefully before you put them back.

6.4 Cleaning the spark plug

This feature is obtained through a ceramic ignition candle with a metal electrode. Keep these components well clean to prevent difficult lighting and check that the burner crown holes are not obstructed.

6.5 Periodic maintenance

Speak to your local Authorised Service Centre periodically to check the conditions of the gas supply pipe and the pressure adjuster, if fitted.

7. TROUBLESHOOTING

WARNING!

Refer to Safety chapters.

7.1 What to do if...

Problem	Possible cause	Remedy
You cannot activate or operate the hob.	The hob is not connected to an electrical supply or it is connected incorrectly.	Check if the hob is correctly connected to the electrical supply. Refer to the connection diagram.
	The fuse is released.	Make sure that the fuse is the cause of the malfunction. If the fuse releases again and again, contact a qualified electrician.
		Activate the hob again and set the heat setting in less than 10 seconds.
	You touched 2 or more sensor fields at the same time.	Touch only one sensor field.
	STOP+GO function operates.	Refer to "Daily use" chapter.
	There is water or fat stains on the control panel.	Clean the control panel.

Problem	Possible cause	Remedy
An acoustic signal sounds and the hob deactivates. An acoustic signal sounds when the hob is deactivated.	You put something on one or more sensor fields.	Remove the object from the sensor fields.
The hob deactivates.	You put something on the sensor field ①.	Remove the object from the sensor field.
Residual heat indicator does not come on.	The zone is not hot because it operated only for a short time.	If the zone operated sufficiently long to be hot, speak to an Authorised Service Centre.
Automatic Heat Up function does not operate.	The zone is hot.	Let the zone become sufficiently cool.
	The highest heat setting is set.	The highest heat setting has the same power as the function.
The heat setting changes between two levels.	Power management function is activated.	Refer to "Daily use" chapter.
The sensor fields become hot.	The cookware is too large or you put it too near to the controls.	Put large cookware on the rear zones if possible.
[-] comes on.	Automatic Switch Off operates.	Deactivate the hob and activate it again.
[L] comes on.	The Child Safety Device or the Lock function operates.	Refer to "Daily use" chapter.
[F] comes on.	There is no cookware on the zone.	Put cookware on the zone.
	The cookware is incorrect.	Use the correct cookware. Refer to "Hints and tips" chapter.
	The diameter of the bottom of the cookware is too small for the zone.	Use cookware with correct dimensions. Refer to "Technical information" chapter.
[E] and a number come on.	There is an error in the hob.	Disconnect the hob from the electrical supply for some time. Disconnect the fuse from the electrical system of the house. Connect it again. If [E] comes on again, speak to an Authorised Service Centre.

Problem	Possible cause	Remedy
E4 comes on.	There is an error in the hob because a cookware boils dry. Automatic Switch Off and the overheating protection for the zones operate.	Deactivate the hob. Remove the hot cookware. After approximately 30 seconds, activate the zone again. If the cookware was the problem, the error message goes out. Residual heat indicator can stay on. Let the cookware become sufficiently cool. Check if your cookware is compatible with the hob. Refer to "Hints and tips" chapter.
There is no spark when you try to activate the spark generator.	The hob is not connected to an electrical supply or it is connected incorrectly.	Check if the hob is correctly connected to the electrical supply.
	The fuse is released.	Make sure that the fuse is the cause of the malfunction. If the fuse releases again and again, contact a qualified electrician.
	Burner cap and crown are placed incorrectly.	Place the burner cap and crown correctly.
The flame extinguishes immediately after ignition.	Thermocouple is not heated up sufficiently.	After lighting the flame, keep the knob pushed for equal or less than 10 seconds.
The flame ring is uneven.	Burner crown is blocked with food residues.	Make sure that the injector is not blocked and the burner crown is clean.

7.2 If you cannot find a solution...

If you cannot find a solution to the problem yourself, contact your dealer or an Authorised Service Centre. Give the data from the rating plate. Give also an error message that comes on. Make sure, you operated the hob correctly. If not the

servicing by a service technician or dealer will not be free of charge, also during the warranty period. The instructions about the Service Centre and conditions of guarantee are in the guarantee booklet.

7.3 Labels supplied with the accessories bag

Stick the adhesive labels as indicated below:

- A)** Stick it on Guarantee Card and send this part (if applicable).
B) Stick it on Guarantee Card and keep this part (if applicable).
C) Stick it on instruction booklet.

8. INSTALLATION

WARNING!
Refer to Safety chapters.

8.1 Before the installation

Before you install the hob, write down the information bellow from the rating plate. The rating plate is on the bottom of the hob.

Model

PNC

Serial number

8.2 Built-in hobs

Only use the built-in hobs after you assemble the hob into correct built-in units and work surfaces that align to the standards.

8.3 Important safety requirements

This hob must be installed in accordance with the Gas Safety (Installation and Use) Regulations (Current Edition) and the IEE Wiring Regulations (Current Edition).

For appliances installed in the Republic of Ireland please refer to NSAI- Domestic Gas Installation I.S. 813 Current Editions and the ETCI Rules for Electrical Installations.

Provision for ventilation

Detailed recommendations are contained in the following British Standards Codes Of Practice: B.S. 6172/ B.S. 5440, Par. 2 and B.S. 6891 Current Editions.

The hob should not be installed in a bed sitting room with a volume of less than 20 m³. If it is installed in a room of

volume less than 5 m³ an air vent of effective area of 100 cm² is required. If it is installed in a room of volume between 5 m³ and 10 m³ an air vent of effective area of 50 cm² is required, while if the volume exceeds 11 m³ no air vent is required.

However, if the room has a door which opens directly to the outside no air vent is required even if the volume is between 5 m³ and 11 m³.

If there are other fuel burning appliances in the same room, B.S. 5440 Part 2 Current Edition, should be consulted to determine the requisite air vent requirements.

For appliances installed in the Republic of Ireland please refer to the NSAI-Domestic Gas Installation I.S. 813 Current Editions Table Four.

Location

The hob may be located in a kitchen, a kitchen/diner or bed sitting room (with a volume greater than 20 m³), but not in a bathroom or shower room.

The minimum distance combustible material can be fitted above the hob in line with the edges of the hob is 400 mm. If it is fitted below 400 mm a space of 50 mm must be allowed from the edges of the hob.

For appliances installed in the Republic of Ireland please refer to NSAI- Domestic Gas Installation I.S 813 Current Edition Section 7- Permitted Locations of Appliance.

8.4 Gas Connection

WARNING!

Any gas installation must be carried out by a GAS SAFE REGISTER installer.

Make sure that, once the hob is installed, it is easily accessible for the engineer in the event of a breakdown.

The manufacturer will not accept liability, should the above instructions or any of the other safety instructions incorporated in this instruction booklet be ignored.

On the end of the shaft, which includes the R 1/2" threaded elbow, adjustment is fixed so that the washer is fitted between the components as shown in the diagram. Screw the parts together without using excessive force.

A) End of shaft with nut

B) Elbow

Connection to the gas supply should be with either rigid or semi-rigid pipe, i.e. steel or copper.

The connection should be suitable for connecting to R 1/2 (1/2 BSP male thread).

When the final connection has been made, it is essential that a thorough leak test is carried out on the hob and installation.

Make sure that the main connection pipe does not exert any strain on the hob.

If you use flexible metal pipes make sure that they agree to ISO 10380 and ISO 10807 standards. Be careful they do not come in touch with mobile parts or they are not squeezed. Also be careful when the hob is put together with an oven.

CAUTION!

It is important to install the elbow correctly, with the shoulder on the end of the thread, fitted to the hob connecting pipe.

CAUTION!

Failure to ensure the correct assembly will cause leakage of gas.

CAUTION!

Make sure that the gas supply pressure of the appliance obeys the recommended values.

Rigid connection:

Carry out connection by using metal rigid pipes (copper with mechanical end).

8.5 Injectors replacement

1. Remove the pan supports.
2. Remove the caps and crowns of the burner.
3. With a socket spanner 7 remove the injectors and replace them with the ones which are necessary for the type of gas you use (see table in "Technical Information" chapter).
4. Assemble the parts, follow the same procedure backwards.
5. Replace the rating plate (it is near the gas supply pipe) with the one for the new type of gas supply. You can find this plate in the package supplied with the appliance.

If the supply gas pressure is changeable or different from the necessary pressure, you must fit an applicable pressure adjuster on the gas supply pipe.

8.6 Adjustment of minimum level

To adjust the minimum level of the burners:

1. Light the burner.
2. Turn the knob on the minimum position.
3. Remove the knob.
4. With a thin screwdriver, adjust the bypass screw position (A).

5. If you change:
 - from natural gas G20 20 mbar to liquid gas, fully tighten the bypass screw in.
 - from liquid gas to natural gas G20 20 mbar, undo the bypass screw approximately 1/4 of a turn.

**WARNING!**

Make sure the flame does not go out when you quickly turn the knob from the maximum position to the minimum position.

8.7 Electrical connection

- Do not pull the mains cable to disconnect the appliance. Always pull the mains plug (if applicable).
- The appliance must not be connected with an extension cable, an adapter or a multiple socket. There is a risk of fire.
- Do not let the power cable to heat up to a temperature of more than 90° C. The cable should be guided by means of clamps fixed to the side of the cabinet, in order to avoid any contact with the equipment beneath the cooktop.
- Make sure that there is access to the mains plug after the installation.

Electrical Requirements

Permanent electrical installation must agree with the latest I.E.E. Regulations and local Electricity Board regulations. For your own safety the installation must be done by a qualified electrician (e.g. your local Electricity Board, or a contractor who is on the roll of the National Inspection Council for Electrical Installation Contracting [NICEIC]).

The manufacturer refuses to be held responsible, if these safety measures are not abided by.

Supply connections

This hob has to be connected to 230 — 240 V (50 Hz) electricity supply.

Before carrying out the connection, make sure:

1. The limiter valve and the electrical system can take the appliance load (see the rating plate)
2. The supply system is equipped with an efficient earth connection in compliance with the current standards and regulations

3. The outlet or omnipolar switch used for connection is easily accessible with the appliance installed.

The appliance is supplied with a 3 core flexible power cable.

The wires in the cord are coloured as follows:

Green and yellow	- Earth
Blue	- Neutral
Brown	- Live

WARNING!

A cut off plug inserted into a 13 amp socket is a serious shock hazard. Ensure that the cut off plug is disposed of safely.

8.8 Replacement of the connection cable

The replacement of electric cable must be carried out exclusively by the service force centre or by personnel with similar competencies, in accordance with the current regulations.

Make sure that the cable section is applicable to the voltage load and the working temperature. The yellow/green earth wire (B) must be approximately 2 cm longer than the live and neutral wire (A).

1. Connect the green and yellow (earth) wire to the terminal which is marked with the letter 'E', or the earth symbol \oplus , or coloured green and yellow.
2. Connect the blue (neutral) wire to the terminal which is marked with the letter 'N' or coloured blue.
3. Connect the brown (live) wire to the terminal which is marked with the letter 'L'. It must always be connected to the network phase. There must be no cut or stray strands of wire present. The cord clamp must be correctly attached to the outer sheath.

8.9 Attaching the seal

1. Clean the worktop around the cut out area.
2. Attach the supplied seal stripe to the lower edge of the hob along the outer edge of the glass ceramic. Do not extend it. Make sure that the ends of the seal stripe are located in the middle of one side of the hob.
3. Add some mm when you cut the seal stripe to the length.
4. Push the two ends of seal stripe together.

8.10 Assembly

**CAUTION!**

Install the appliance only on a worktop with a flat surface.

A) Removable panel

B) Space for connections

8.11 Possibilities for insertion

Kitchen unit with door

The panel installed below the hob must be easy to remove and let an easy access in case a technical assistance intervention is necessary.

9. TECHNICAL INFORMATION

9.1 Hob dimensions

Width	590 mm
Depth	520 mm

9.2 Cooking zones specification

Cooking zone	Nominal power (maximum heat setting) [W]	Power function [W]	Power function maximum duration [min]	Cookware diameter [mm]
Left front	2300	3300	10	180 - 210
Left rear	1400	2500	4	125 - 140

The power of the cooking zones can be different in some small range from the data in the table. It changes with the material and dimensions of the cookware.

For optimal cooking results use cookware not larger than the diameter in the table.

9.3 Bypass diameters

BURNER	Ø BYPASS 1/100 mm
Rapid	52
Semi-rapid	32

9.4 Other technical data

TOTAL POWER:	Gas original:	G20 (2H) 20 mbar = 4,8 kW
	Gas replacement:	G30 (3+) 28-30 mbar = 334 g/h G31 (3+) 37 mbar = 329 g/h
	Electric zones:	3,7 kW
Electric supply:	230 V ~ 50 Hz	
Appliance category:	II2H3+	
Gas connection:	R 1/2"	
Appliance class:	3	

9.5 Gas burners for NATURAL GAS G20 20 mbar

BURNER	NORMAL POWER kW	MINIMUM POWER kW	INJECTOR MARK 1/100 mm
Rapid	2,9	0,75	119
Semi-rapid	1,9	0,45	96

9.6 Gas burners for LPG G30/G31 28-30/37 mbar

BURNER	NORMAL POWER kW	MINIMUM POWER kW	INJECTOR MARK 1/100 mm	NOMINAL GAS FLOW g/h	
				G30 28-30 mbar	G31 37 mbar
Rapid	2,7	0,75	86	196	193
Semi-rapid	1,9	0,45	71	138	136

10. ENVIRONMENTAL CONCERNS

Recycle the materials with the symbol . Put the packaging in applicable containers to recycle it. Help protect the environment and human health and to recycle waste of electrical and electronic appliances. Do not dispose appliances marked with the symbol  with the household waste. Return the product to your local recycling facility or contact your municipal office.
